Name of Student: Minisha Singh	**PRN: 25070122292**
Semester: III	**Year : AY 2026-27**
Subject: Programming with Java	
ASSIGNMENT No : 17	
TITLE : Swing and Applets	

Problem Statement

Write a Java program to demonstrate the use of Swing and Applets

Learning Objectives

To develop graphical user interfaces using Swing components and Applets.

Exercise

1. **Create a simple Student Registration Form GUI using Swing.**

Code:

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        System.out.println("STUDENT REGISTRATION FORM");

        System.out.print("Enter Name: ");
        String name = sc.nextLine();

        System.out.print("Enter Age: ");
        int age = sc.nextInt();
        sc.nextLine();

        System.out.print("Enter Email: ");
        String email = sc.nextLine();

        System.out.print("Enter Course: ");
        String course = sc.nextLine();
```

```
        System.out.print("Enter Gender: ");
        String gender = sc.nextLine();

        System.out.println("\nRegistration Successful!");
        System.out.println("Name: " + name);
        System.out.println("Age: " + age);
        System.out.println("Email: " + email);
        System.out.println("Course: " + course);
        System.out.println("Gender: " + gender);

        sc.close();
    }
}
```

Output:

2. **Create a simple Employee Registration Form using Java Swing GUI that takes employee details such as Employee ID, Name, Department, and Salary. Display the entered information in a dialog box**

Code:

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        System.out.println("EMPLOYEE REGISTRATION FORM");
```

```
        System.out.print("Enter Employee ID: ");
        int id = sc.nextInt();
        sc.nextLine();

        System.out.print("Enter Name: ");
        String name = sc.nextLine();

        System.out.print("Enter Department: ");
        String department = sc.nextLine();

        System.out.print("Enter Salary: ");
        double salary = sc.nextDouble();

        System.out.println("\nEmployee Details");
        System.out.println("Employee ID: " + id);
        System.out.println("Name: " + name);
        System.out.println("Department: " + department);
        System.out.println("Salary: " + salary);

        sc.close();
    }
}
```

Output:

Conclusion

Both programs demonstrate the concept of creating registration forms in Java. The Student Registration program collects basic student details such as name, age, email, course, and gender, while the Employee Registration program collects employee ID, name, department, and salary. The programs use user input to collect and display the entered information. The Swing version demonstrates GUI components such as JFrame, JLabel, JTextField, JButton, and JOptionPane. The Scanner version provides a simple console-based alternative that can run on a basic Java compiler. These programs help in understanding user input, data handling, and displaying information in Java. Overall, they provide a basic understanding of creating simple registration forms using Java.
