Name of Student: Minisha Singh	**PRN: 25070122292**
Semester: III	**Year : AY 2026-27**
Subject: Programming with Java	
ASSIGNMENT No : 12	
TITLE : User-Defined Packages	

Problem Statement

Write a Java program to create and use user-defined packages.

Learning Objectives

To create and use user-defined packages for organizing Java programs.

Exercise

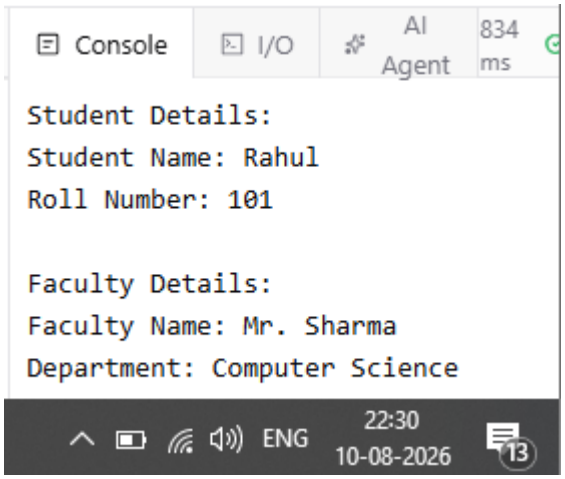

1. Create a Java program by developing user-defined packages for a College Management System. Create separate packages for student and faculty details, and display their information using classes from these packages.

Code:

```
class Student {
String name;
int rollNo;
Student(String name, int rollNo) {
this.name = name;
this.rollNo = rollNo;
}
void display() {
System.out.println("Student Name: " + name);
System.out.println("Roll Number: " + rollNo);
}
}
class Faculty {
String name;
String department;
Faculty(String name, String department) {
this.name = name;
this.department = department;
}
void display() {
```

```
System.out.println("Faculty Name: " + name);
System.out.println("Department: " + department);
}
}
public class Main {
public static void main(String[] args) {
Student s = new Student("Rahul", 101);
Faculty f = new Faculty("Mr. Sharma", "Computer Science");
System.out.println("Student Details:");
s.display();
System.out.println();
System.out.println("Faculty Details:");
f.display();
}
}
```

Output:

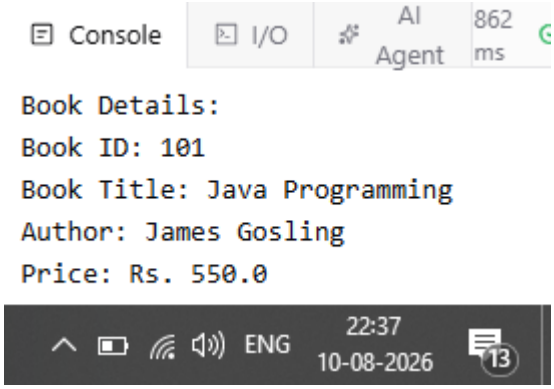

2.Create a Java program by developing a user-defined package named library that contains a class to store and display book details such as book ID, title, author, and price. Import the package into the main program and display the book information.

Code:

```
class Book {
String title;
int bookId;
String author;
double price;
Book(String title, int bookId, String author, double price) {
this.title = title;
this.bookId = bookId;
this.author = author;
this.price = price;
```

```
}
void display() {
System.out.println("Book ID: " + bookId);
System.out.println("Book Title: " + title);
System.out.println("Author: " + author);
System.out.println("Price: Rs. " + price);
}
}
public class Main {
public static void main(String[] args) {
Book b = new Book("Java Programming", 101, "James Gosling", 550.00);
System.out.println("Book Details:");
b.display();
}
}
```

Output:

Conclusion

The program successfully demonstrates the creation and use of user-defined packages in Java.Packages help in organizing classes and programs in a systematic manner.They make the code easier to manage, understand, and maintain.The program also shows how classes can be accessed and used in a main program.User-defined packages improve code reusability and avoid naming conflicts.Thus, packages are useful for developing well-structured Java applications.
