Name of Student: Minisha Singh	**PRN: 25070122292**
Semester: III	**Year : AY 2026-27**
Subject: Programming with Java	
ASSIGNMENT No : 13	
TITLE : File Handling in Java	

Problem Statement

Write a Java program to perform reading from and writing to a file using file handling operations.

Learning Objectives

To perform file reading and writing operations using Java file handling classes.

Exercise

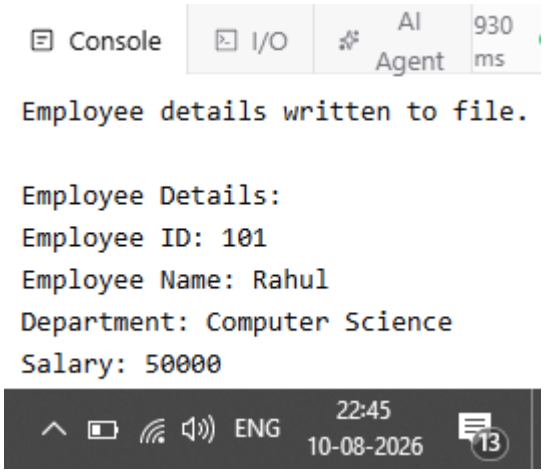

1. Create a program to write and read employee details from a file.

Code:

```
import java.io.*;
class Main {
public static void main(String[] args) {
try {
FileWriter fw = new FileWriter("employee.txt");
fw.write("Employee ID: 101\n");
fw.write("Employee Name: Rahul\n");
fw.write("Department: Computer Science\n");
fw.write("Salary: 50000\n");
fw.close();
System.out.println("Employee details written to file.\n");
FileReader fr = new FileReader("employee.txt");
BufferedReader br = new BufferedReader(fr);
String line;
System.out.println("Employee Details:");
while ((line = br.readLine()) != null) {
System.out.println(line);
}
br.close();
fr.close();
} catch (IOException e) {
```

```
System.out.println("An error occurred.");
}
}
}
```

Output:

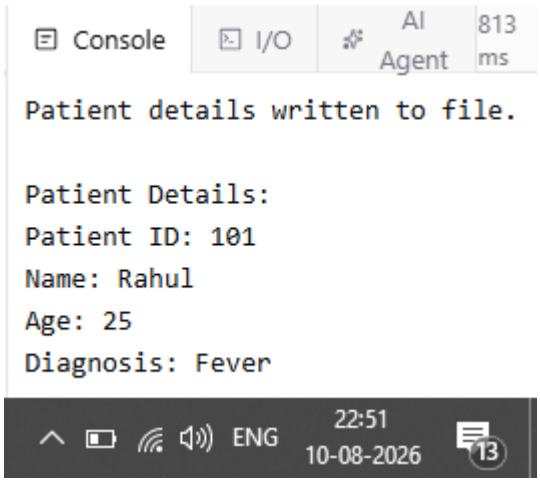

2. Create a Java program to write patient details (patient ID, name, age, and diagnosis) to a file and read the details from the file for display.

Code:

```
import java.io.*;
public class Main {
public static void main(String[] args) {
try {
FileWriter fw = new FileWriter("patient.txt");
fw.write("Patient ID: 101\n");
fw.write("Name: Rahul\n");
fw.write("Age: 25\n");
fw.write("Diagnosis: Fever\n");
fw.close();
System.out.println("Patient details written to file.");
System.out.println();
FileReader fr = new FileReader("patient.txt");
BufferedReader br = new BufferedReader(fr);
System.out.println("Patient Details:");
String line;
while ((line = br.readLine()) != null) {
System.out.println(line);
}
br.close();
fr.close();
} catch (IOException e) {
```

```
System.out.println("An error occurred.");
}
}
}
```

Output:

Conclusion

The program successfully demonstrates file reading and writing operations in Java.It shows how data can be written and stored in a file using Java file handling classes.The program also reads the stored data from the file and displays it on the screen.File handling helps in storing data permanently for future use.It makes data management simple and efficient.Thus, Java file handling classes are useful for performing read and write operations.
