Name of Student: Minisha Singh	**PRN: 25070122292**
Semester: III	**Year : AY 2026-27**
Subject: Programming with Java	
ASSIGNMENT No : 8	
TITLE : Super Keyword in Java	

Problem Statement

Write a Java program to demonstrate the use of the super keyword in inheritance.

Learning Objectives

To demonstrate the use of the super keyword for accessing parent class members.

Exercise

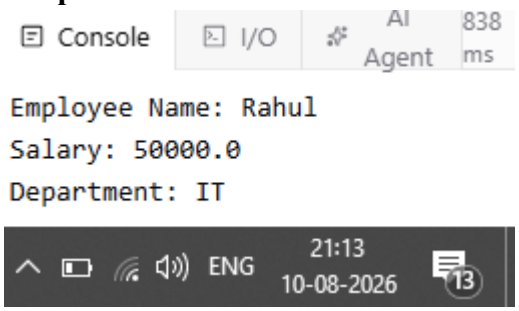

1.Create an Employee and Manager program where Manager accesses Employee details using super keyword.

Code:

```
class Employee {
String name;
double salary;
Employee(String name, double salary) {
this.name = name;
this.salary = salary;
}
void display() {
System.out.println("Employee Name: " + name);
System.out.println("Salary: " + salary);
}
}
class Manager extends Employee {
String department;
Manager(String name, double salary, String department) {
super(name, salary);
this.department = department;
}
void displayManager() {
super.display();
System.out.println("Department: " + department);
```

```
}
}
public class Main {
public static void main(String[] args) {
Manager m = new Manager("Rahul", 50000, "IT");
m.displayManager();
}
}
```

Output:

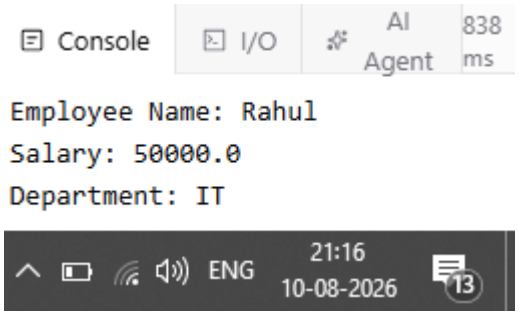

2.Develop a Vehicle Insurance System where child insurance classes access parent vehicle information using the super keyword.

Code:

```
class Employee {
String name;
double salary;
Employee(String name, double salary) {
this.name = name;
this.salary = salary;
}
void display() {
System.out.println("Employee Name: " + name);
System.out.println("Salary: " + salary);
}
}
class Manager extends Employee {
String department;
Manager(String name, double salary, String department) {
super(name, salary);
this.department = department;
}
void displayManager() {
super.display();
System.out.println("Department: " + department);
```

```
}
}
public class Main {
public static void main(String[] args) {
Manager m = new Manager("Rahul", 50000, "IT");
m.displayManager();
}
}
```

Output:

Conclusion

The `super` keyword is used to access members of the parent class.It helps the child class use the parent class constructor and methods.It avoids confusion between parent and child class members.In this program, the Manager class uses `super` to access Employee details.
Thus, `super` helps in achieving proper inheritance and code reusability in Java.
