Name of Student: Minisha Singh	**PRN: 25070122292**
Semester: III	**Year : AY 2026-27**
Subject: Programming with Java	
ASSIGNMENT No : 9	
TITLE : Final Keyword in Java	

Problem Statement

Write a Java program to demonstrate the use of the final keyword with variables, methods, and classes.

Learning Objectives

To implement the final keyword with variables, methods, and classes.

Exercise

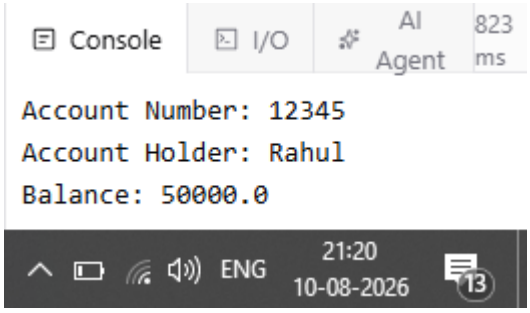

1. Create a Bank Account program where account number is final and cannot be changed.

Code:

```
class BankAccount {
final int accountNumber;
String name;
double balance;
BankAccount(int accountNumber, String name, double balance) {
this.accountNumber = accountNumber;
this.name = name;
this.balance = balance;
}
void display() {
System.out.println("Account Number: " + accountNumber);
System.out.println("Account Holder: " + name);
System.out.println("Balance: " + balance);
}
}
public class Main {
public static void main(String[] args) {
BankAccount account = new BankAccount(12345, "Rahul", 50000);
account.display();
}
```

}

Output:

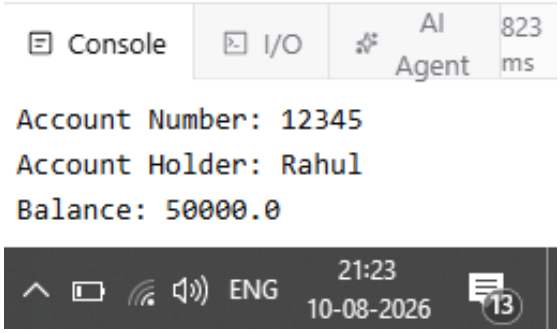

2.Create a Library Book Management program where the book ISBN is declared as final and cannot be changed once assigned. Display the book's ISBN, title, author, and price.

Code:

```
class BankAccount {
final int accountNumber;
String name;
double balance;
BankAccount(int accountNumber, String name, double balance) {
this.accountNumber = accountNumber;
this.name = name;
this.balance = balance;
}
void display() {
System.out.println("Account Number: " + accountNumber);
System.out.println("Account Holder: " + name);
System.out.println("Balance: " + balance);
}
}
public class Main {
public static void main(String[] args) {
BankAccount account = new BankAccount(12345, "Rahul", 50000);
account.display();
}
}
```

Output:

Conclusion

The `final` keyword is used to restrict changes in Java. A final variable cannot be changed once it is assigned a value, while a final method cannot be overridden by a child class. A final class cannot be inherited by another class. Thus, the `final` keyword helps provide security, maintain data integrity, and prevent unwanted modifications in a program.
