Name of Student: Minisha Singh	**PRN: 25070122292**
Semester: III	**Year: AY 2026-27**
Subject: Programming with Java	
ASSIGNMENT No: 29	
TITLE: Write a JSP application to demonstrate the basic concepts of Java Server Pages.	

Problem Statement

Write a JSP application to demonstrate the basic concepts of Java Server Pages.

Learning Objectives

To develop dynamic web pages using Java Server Pages.

Programme

1. Create a JSP page to display student information entered by the user

student.jsp:

```
<!DOCTYPE html>
<html>
<head>
   <title>Student Information</title>
</head>
<body>
   <h2>Student Information Form</h2>

   <form action="studentResult.jsp" method="post">
      Name: <input type="text" name="name" required><br><br>
      Roll Number: <input type="text" name="roll" required><br><br>
      Course: <input type="text" name="course" required><br><br>
      Semester: <input type="number" name="semester" required><br><br>

      <input type="submit" value="Submit">
   </form>
</body>
</html>
```

StudentResult.jsp Code:

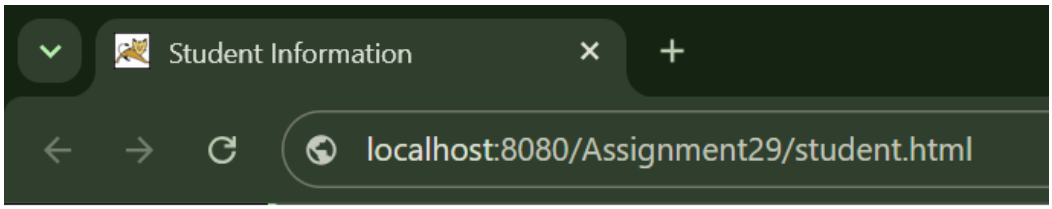

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
pageEncoding="UTF-8" %>
<!DOCTYPE html>
<html>
<head>
   <title>Student Details</title>
</head>
<body>
   <h2>Submitted Student Information</h2>

   <%
      String name = request.getParameter("name");
      String roll = request.getParameter("roll");
      String course = request.getParameter("course");
      String semester = request.getParameter("semester");
   %>

   <p>Name: <%= name %></p>
   <p>Roll Number: <%= roll %></p>
   <p>Course: <%= course %></p>
   <p>Semester: <%= semester %></p>

   <a href="student.html">Back to Form</a>
</body>
</html>
```

Output:

Student Information Form

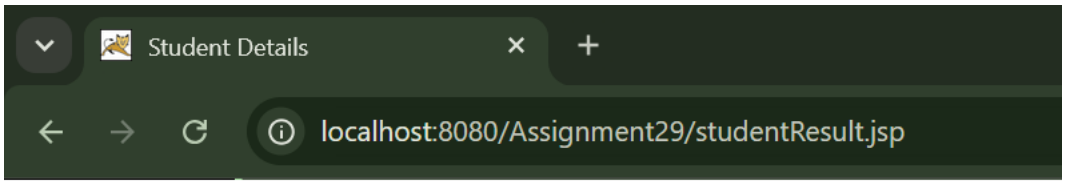

Name: Minisha Singh

Roll Number: 292

Course: CSE

Semester: 3

Submit

Submitted Student Information

Name: Minisha Singh

Roll Number: 292

Course: CSE

Semester: 3

Back to Form

2. Create a JSP application that takes user registration details such as Name, Email, Phone Number, and Password, and displays the submitted information on a result JSP page.

Registeration.jsp code:

```jsp
<html>
<head>
    <title>User Registration</title>
</head>
<body>

<h2>User Registration</h2>

<form action="result.jsp" method="post">

    Name:
    <input type="text" name="name"><br><br>

    Email:
    <input type="email" name="email"><br><br>

    Phone Number:
    <input type="text" name="phone"><br><br>

    Password:
    <input type="password" name="password"><br><br>

    <input type="submit" value="Register">

</form>

</body>
</html>
```

result.jsp code:

```jsp
<html>
<head>
    <title>Registration Result</title>
</head>
<body>
```

<h2>Registration Details</h2>

Name: <%= request.getParameter("name") %>

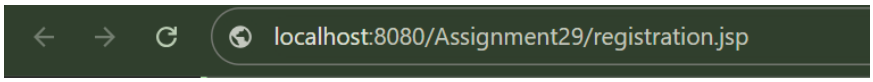

Email: <%= request.getParameter("email") %>

Phone Number: <%= request.getParameter("phone") %>

Password: <%= request.getParameter("password") %>

</body>
</html>
```

**Output:**

```jsp

## User Registration

Name: Minisha Singh

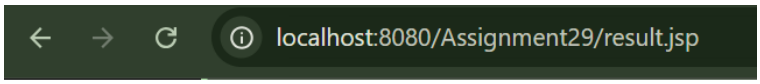

Email: minisha@example.com

Phone Number: 9876543210

Password: ••••••••

Register

```

```jsp

## Registration Details

Name: Minisha Singh

Email: minisha@example.com

Phone Number: 9876543210

Password: ••••••••

```
```

Conclusion

Thus, the JSP application was successfully developed to demonstrate a registration form and display the submitted details on a result page. The application accepts user information such as name, email, phone number, and password. JSP was used to process the submitted data and display the result dynamically. The application was executed using the Apache Tomcat server. This experiment helped in understanding JSP forms, request parameters, and server-side processing.
